

Selec	tion & Specifcation Data	Surface Prep	RECOMMENDED SUBSTRATE CONDITIONS Surface should be dry and free of foreign matter Steel; blast cleaned to ISO-Sa2S (NASE 3), blasting profile 30 - 75 mkm (1.2 – 3.0 mils) or according to ISO-St3	
Product Name	Bronya Winter	Ferrous Surfaces	Should be prim	ed prior to application of Bronya
Description	Bronya Winter -the latest development in the line of ultra-thin liquid ceramic thermal insulation materials. Work on the application of Bronya Winter can be carried out both at low temperatures and positive from -35 °C to +30 °C, while the minimum temperature of application of conventional GITM can not be lower than +5 +7 °C. the heat Insulator Bronya Winter consists of a composition of special	Surfaces	Winter. Since the coating is waterbased, it is important to have a boundary layer of protection to prevent flash rusting.	
		Non-ferrous Surfaces	The coating can be applied directly to nonferrous surfaces. Surface should be clean and free of any oil, dirt or other foreign matter.	
	acrylic polymers and hollow vacuumized ceramic microspheres, as well as pigmenting, flame retardant, rheological and inhibiting additives.	Application Equipment		
Features	 allows to perform thermal insulation of building structures made of metal, wood, concrete, brick, plastic and other materials, as well as metal 	Listed below are the general equipment guidelines for the		
		application of this Airless Sprayer	•	2211 or lorgor
	products, pipelines, industrial equipment for various	Alliess Sprayer	Volume:	33:1 or larger 1.5 gpm (5.7 lpm) or greater
	 purposes; allows to perform works on thermal insulation in the winter period of time at negative temperatures to - 		Hose:	3/8" or larger with no more
	35°C;allows you to isolate the equipment without stopping technological processes.			than 3' of 1/4" whip. 1/2" hose recommended for length above 50'.
Base	Water-based Acrylic Insulation Coating		Tip Size:	0.017" (for tight spots) 0.019–0.023" (Normal use)
Gloss	Flat		Pressure:	Minimum of 3000 PSI
Priming	Self priming over non-ferrous materials (stainless steel & aluminum). Primer required for carbon steel substrates.	Small Spray Application	Please consult NPO Bronya Ltd. for the Small Application Gun. This gun is excellent for small applications and touch-ups.	
Topcoats	Please consult NPO Bronya Ltd.	Brush	Can use	
Wet Weight	5.2–5.3 lbs/gallon (0.63 kg/liter)	Rolling	Not recommended for this coating	
Weight dry flm to area	0.035 lbs/ft ² at 20 mils dft (0.170 kg/m² at 0.50 mm dft)	Application Conditions		
Practical Volume Solids Content		Surface Temperatures	Surface temperatures for applications should b greater than 60°F (15°C) or above. Lower surfatemperatures will increase dry times.	
Average Coat Thickness	20–22 mils WFT at 70°–130°F (0.5 mm WFT at 21°–54°C	Applications	Ambient & Cold (60°–139°F, 15°–59°C): For temperatures (surface or ambient – whichever lower), an initial tack coat is recommended of 1 mils (0.25 mm or 250 microns). This tack coat w help eliminate sag on vertical wall applications. Tack coat should be dry to touch prior to next pass. Typical coat thickness should not exceed 20–22 mils (0.5–0.55mm) wet. Coating can be reapplied after each coat is thoroughly dry. Hot (>140°F, >60°C):	
Practical Dry Coat Coverage	50—55 ft²/gal @ 20 mils (1.3 m²/liter @ 0.5 mm)			
VOC Content	0.06 lbs/gal (7.6 grams/liter)			
Limitations	Applications should not exceed 375°F (190°C).			
Storage	Do not subject wet coating in pail form to freezing conditions. Coating should be kept in a warehouse between 60°F and 90°F			NPO Bronya Ltd.
		Application Thickness	Product can be applied in successive coats to increase insulation ability. There are no upper limitations.	
		Dryfall	Dryfall within a	3 ft radius

Coating Specifcations

Appearance composition	Suspension white	#.4.2. TC
Surface appearance	semi-plain matte film grey (beige)	#.4.3. TC
Mass fraction of nonvolatile substances in the composition, not less than	at least 50 %	#. 4.4. TC
Ratio heat transfer, W/m2· °C	1,4±0,7	#. 4.5. TC
Ratio thermal conductivity, W/m·°C	0,001±0,0002	#. 4.6. TC
Resistance to static action water at 20°C for	24 h	
The adhesion of the coating	at least 1	GOST 9.403-80 method A
Linear elongation, %	at least 1	GOST 28574-2014
Resistance variable temperature	More than 80	GOST 18299-72
Combustibility group	Г1	GOST 25898-2012
Group smoke-forming ability	B1	GOST 30244
Group Flammability	Д2	GOST 30402
Group toxicity combustion products	T2	GOST 12.01.044
Drying time for degree 3	5 hours	GOST 19007-73
Coverage dried film	186	GOST 8784-75
Film strength at impact	30	GOST 4765-73
UV resistance change in percent after 48 hours of irradiation	0,5 %	GOST 21903-76 method 2
Solar reflection	83%	ASTM E 903:01
The normal ratio radiation corrected	0,91	EN 673:1997
The ratio of OSL (SRI) for conditions with weak wind	103,56	ASTM E 1980:01
The ratio of OSL (SRI) for conditions with moderate wind	103,30	ASTM E 1980:01
The ratio of OSL (SRI) for conditions when the wind is strong	103,01	ASTM E 1980:01
The coefficient of permeability of the material, mg/m h PA	0,03	GOST 25898-2012
Surface temperature when applying the material,°C from	-20 to + 40	
Operating temperature, °C	-60 to + 90	
Mass fraction of volatile substances, not more, %	43	
Hydrogen index of the material, pH	7.5-11.0	
Drying time and film formation at a temperature of (20±2)°C, not less than	24 hours	
Adhesion of the coating on the separation force, not less than, Mpa to concrete and brick surface to steel	1,3 2,2	
Resistance of coat to static action at a temperature of (20±2)°C, not less: Waters 5% NaOH solution	unchanged unchanged	

Cleanup & Safety Equipment may be cleaned with soap & water Cleanup Safety Half-face respirator recommended with ammonia cartridge or better. Eye protection recommended. Ventilation Recommended for constricted areas. Caution This material is not for human consumption Safety clothing & gloves are recommended Clothing **Mixing & Thinning** Only a mud mixing paddle should be used. Use Mixing 1/2" drill motor to stir contents with paddle. Make sure drill is set to reverse to ensure that the paddle will not mar the bucket's inner wall. Please consult NPO Bronya Ltd. for paddle, if needed. Thinning Dilution Bronya Winter solvent is a must, Thinning and depends on the surface of the object and the method of applying thermal insulation, as well as the temperature of the surrounding air and the surface to be painted.For the application of superfine heat insulation Bronya Winter, according to the instructions for use on the surface of the object, if necessary, should be brought to the working viscosity with solvent ortoxylol. In order to choose another solvent correctly, you can test it on

a small amount of insulation. If the solvent does not fit the insulation can be folded or lose adhesion (the material will become oily and stop sticking to the surface).Categorically, as a solvent, you can not

Coating is one part, so no catalyzation is

 needed. Pail can be reused if properly sealed.

 Container
 20 liters

 Package, Handling & Storage

 Container Wet (with pail/lid)
 12.47–12.7 kg per 20 liters

 Net Contents
 11.7 kg per 20 liters

 Flash Point (Setaflash)
 None

 Storage
 Do not subject wet coating in pail form to freezing conditions. Coating should be kept in

use white Spirit!

Shelf Life12 months shelf life from manufacture date.CautionDo not let product freeze.
